V2 Litepaper

OVERVIEW

As DeFi is a constantly evolving space, Rejuvenate Finance has every intention to grow with the space and innovate to ensure the safety of DeFi investors. This mission brings the next step in Rejuvenate's journey. With the V2 migration comes:
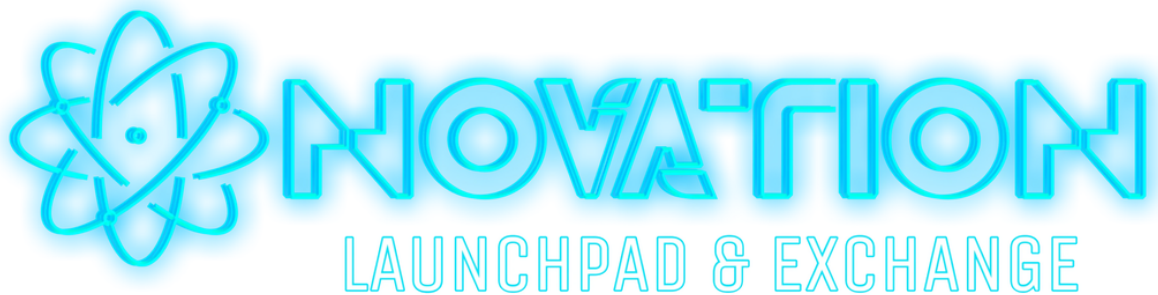

Refund Protocol

RJV will soon be offering protocols the ability to open up an insurance fund on our platform. This fund will serve as a refund source for users in the event the source protocol fails. The protocol will be represented within the RJV ecosystem by an NFT which will serve as a refund ticket for the individual users.

If the protocol rugs users will be entitled to their share established at the pools creation. Protocols will also have the ability to distribute funds if hacked. The protocol will have the option to add funds to insure more per users or support more users, but will not be able to remove funds. More details of this feature will be released when live.

Liquidity Incentive Program

This program will be launched along side our yield farm. This will allow investors to provide liquidity through the yield farm with additional benefits. Details will be provided as the release date gets closer, TBD.

PARTNERSHIP

Rejuvenate is proud to announce our partnership with Vault Finance and the joining of Novation. Moving our liquidity to Novation's Exchange, $RJVF will gain dynamic tokenomics as well as be part of their sell-less trading platform.

Tokenomics:

15% sell tax: sent to burn wallet

15% buy tax: 10% will be sent to treasury for buyback, Rug Recovery, etc. 5% will be sent to team wallet for marketing and maintenance.

THANK YOU

We thank all of our early investors that have stuck with us through these development stages. What started as a yearning to help those in the DeFi space is growing into an ecosystem that will help many. In the coming weeks, be on the lookout for upcoming announcements regarding the liquidity incentive program, yield farms, the Rug Recovery process and yet-to-be announced features. The official whitepaper will be posted to the website with full descriptions on every feature available now and those to come.
